

Where FORMS

You write it. We process it.

WhereForms is an electronic forms application that gives on-site and mobile users the ability to capture many types of information using handwritten text, annotated photos, sketches, attached files and annotated CAD drawings. The user completes the form by entering information into a tablet PC. Users are then able to immediately transmit the form via e-mail (even while working remotely) to recipients. Data and images can also be transmitted in XML format, thus making database storage nearly effortless. Electronic forms can be stored, searched and even processed through our workflow module.

WhereForms Benefits

- Handwritten forms are automatically converted to data
- Real-time data collection and access through a variety of hardware and wireless technology options
- Eliminate the need to re-key information
- Provides a mobile workforce solution for field professionals
- Digital camera allows for users to easily integrate photos into a form
- Virtually eliminate phone calls, faxes and paper
- Choose from a variety of configuration options
